Re: Bowhill Engineering and Robin Johnson Engineering (RJE)

RJE have enjoyed a positive and ongoing relationship with Bowhill Engineering for over 5 years.

During this period Bowhill Engineering have tendered and completed numerous successful, high quality structural steel projects for RJE.

Bowhill Engineering has always demonstrated outstanding communication whether it be complying with contractual obligations or conveying engineering solutions to enhance the overall project directives and timelines.

Respect for our clients views and requirements have always been met with positive enthusiasm even when dealing with difficult or demanding circumstances.

RJE's business relies on utilising high quality steel fabricators who take pride in their workmanship and are keen to develop long term relationships. Bowhill Engineering certainly meets these criteria.

Their QA and safety systems are very mature and it is clearly evident that they take seriously their commitment to safety and quality, in both action and documented processes.

Many of RJE's projects are dynamic in nature with short time frames, in such instances Bowhill Engineering's name comes to the forefront when RJE are planning our work execution methodologies.

RJE look forward to our continuing relationship with Bowhill Engineering and would highly recommend them to any organisation that requires an enthusiastic team to deliver high quality, cost competitive structural steel.

Yours Faithfully

Gary Gifford
