Attn: Jeremy Hawkes

Dear Jeremy,

RE: FLINDERS UNIVERSITY CAR PARK 5 – EXTENSION

We would like to compliment your company on the pivotal role that it played in making this recently completed project a success.

That your company was able to halve an eight week design delay, is testament to the resources Bowhill Engineering made available to this project. It enabled the University to take possession of the car park close to the start of semester despite the initial delay.

A. J. Chappell were impressed with the technical resources at your disposal, accurate shop drawings, some in three dimensions, were produced in house and provided to assist the architect resolve the design issues in the early stages. We believe that this ability alone gives your company a leading edge in the structural steel industry.

The accuracy and quality of the steel work in this project is of a very high standard. This, coupled with a high level of offsite manufacturing, reduced the amount of time that erectors were on site and therefore lessened the disruption to other trades. Considering the size and complex falls on the car park deck, the accuracy of the fitting on site bears witness to both your set out and CAD skills.

Our company was particularly impressed with the 'cooperative' nature of Simon and yourself to achieve the best possible outcome for the project and to short circuit delays at the design, and manufacturing stages. It is rare in this industry to feel that builders and contractors are genuinely working together to achieve a goal.

We look forward to working with Bowhill Engineering in the future.

Yours faithfully

Alex Bennett
SENIOR PROJECT MANAGER
